Product Lineup

Formlabs designs and manufactures professional 3D printing hardware, software, and materials for prototyping and production.

Form 2

Form Wash + Cure

Fuse 1

Form 3 + 3L

Our products are used by **enterprises** to design **products** as diverse as robots, cars, surgical guides, and earbuds.

Engineering Resins

For functional prototyping, pre-production, and production jigs and fixtures.

Grey Pro: an all-purpose functional prototyping material with high precision, moderate elongation, and low creep.

Durable: produces parts that are resistant to friction and wear, with low modulus, high elongation, and high impact strength.

High Temp: has the highest heat deflection temperature (HDT) on the 3D printing materials market.

Rigid: our first glass- reinforced material, produces parts that are exceptionally stiff and strong.

Tough: balances strength and compliance, making it the ideal choice for prototyping strong, functional parts.

Flexible: An 80A Shore durometer material for more rigid flexible parts with a matte-black soft-touch finish.

Elastic: Our softest Engineering Resin, this 50A Shore durometer material is suitable for prototyping parts normally produced with silicone.

Jewelry Resins

Formlabs jewelry materials are formulated to capture breathtaking detail, allowing you to create custom jewelry cost-effectively.

Castable Wax: A 20% wax-filled material for reliable casting with zero ash content and clean burnout, Castable Wax Resin accurately captures intricate features and smooth surfaces SLA is known for.

Castable: Our original jewelry material for direct investment casting. This material requires a slightly different burnout schedule to a traditional photopolymer. Requires post-cure.

Design By Tomas Witt

Grey: Matte finish shows details well, making it ideal for rapid and cost effective jewelry prototyping. Perfect for inexpensive ring fittings.

Design by Zina Sterling

High Temp: Designed for precision and is strong enough to withstand the temperatures and pressures of vulcanized rubber molding. Suitable for RTV.

Dental Resins

Formlabs Dental Resins empower dental labs and practices to rapidly manufacture a range of dental **products** in-house, from biocompatible surgical guides to orthodontic models, splints, retainers, and aligners.

Dental SG: An autoclavable, Class 1 biocompatible resin, Dental SG is designed for printing precise surgical guides and similar devices.

Dental Model: Designed for crown and bridge models with removeable dies. Print crisp margins and contacts with ± 35 microns.

Grey: The smooth matte finish of Grey resin is ideal for a variety of dental applications, as well as vacuum-forming aligners or other appliances.

Dental LT Clear: A Class IIA long-term biocompatible resin with high resistance to fracture and wear that is ideal for hard splints, retainers, and other direct- printed long term orthodontic appliances.

Dentures Resins: Class II long- term biocompatible **Denture Base Resin** and Denture Teeth Resin enable dental professionals to produce 3D printed full dentures accurately and reliably.

Form 3
Flawless Prints, Every Time.

The image shows a Form 3 3D printer with a transparent orange safety enclosure. Inside, a 3D printed part is visible. In front of the printer are several 3D printed objects, including a blue and white mechanical part and a blue and black mechanical part.

Form 3 Tech Specs
The Next Generation of Industrial 3D Printing.

Technology	Dimensions	Build Volume
LP® Laser Power	40.5" x 27.5" x 55 cm	14.5" x 9.5" x 35.5 cm
Formlabs PreScribe	16.5" x 16.5" x 23.5 cm	5.7" x 5.7" x 11 cm
Layer Thickness	Optics Engine	Monocure
20 - 500 microns	1000 - 10000 microns	One Year Warranty Included
1000 - 10000 microns	200 and 400 microns	Direct Materials
	80 microns (0.00315 in)	Pre-Sort and Essential
	Lowest cost	Plus modules
